Polly want a video call?

Parrots are a very social species and love to connect with other birds, but they are often kept alone as pets. Scientists from the US taught pet parrots to video call each other to help them feel less lonely - and the results were amazing! All the parrots in the study showed signs of improved wellbeing. The parrots would sing, play around, go upside down and show the other birds their toys.

ENGLAND

Zoo hiring people to dress up as birds

Blackpool Zoo has posted a job advert for 'Seagull Deterrents,' asking people to dress up in inflatable bird costumes to scare away seagulls. The nuisance seagulls steal food from visitors and animals. The advert says the ideal candidate must be 'comfortable wearing a bird costume!'

CANADA

Woman accidentally ordered 333,000 chocolate bars

A woman in Canada accidentally ordered 333,000 Rum and Butter chocolate bars - all with the expiry date of June 2023! She had to think fast and managed to sell 200,000 of them. However, due to the looming expiry date, many stores and food banks refused to take them. She has now given away the rest - including sending some to Ukraine.

Take your Child to Work Day - at the White House!

Have you ever wondered what grown ups do at work all day? Well, the President of the USA let his employees' children find out! President Biden hosted a Take Your Child to Work Day where grown ups could bring their children to the White House - and they even got to dress up like their parents too! Here is his secret service team looking a little smaller than usual!

World's first colour changing car

In the future if you're ever stuck on what colour car to buy, you might be able to buy them all! BMW has revealed the world's first colour changing car - which can switch between 32 different colours in a matter of seconds. The chameleon-like car, called the i Vision Dee, uses special electronic ink technology on the body panels. There are no plans for the car to be made available just yet.
